Original Uploaded File

File Name: assign_9_6a50ee10a80d64.89876813.docx

File Type: docx

File Size: 281.6 KB

SHA-256 Fingerprint: f863254a3d9f757fa3459feb32b7d783fc6a2670a362d50dfd895f27faa39c76

This report was generated by reading and analyzing this exact file. The fingerprint above uniquely identifies the precise bytes that were uploaded and analyzed.

2.0 ENTITY-RELATIONSHIP DIAGRAM (ERD)

Figure 1 Entity Relationship Diagram for AI Checker System

Figure 1 shows the Entity Relationship Diagram (ERD) for our AI Checker System. The ERD got several main tables such as users, assignments, plans, payments, payment_transactions, user_subscriptions, assignment_reviews, plag_ai, notifications, vouchers, contacts, and testimonials. Users table is one of the main tables because it stores user and admin information. One user can submit many assignments, receive many notifications, make payments, and subscribe to a plan. The assignment table is connected to assignment_reviews and plag_ai because each submitted assignment can be reviewed by the asmin and checked by for AI or similarity score. The plans, payments, and user_subscriptions table are used to manage subscription plans and payment records.

3.0 SYSTEM REQUIREMENTS

Requirement	Description
Operating System	Windows 10 / Windows 11
Web Hosting Platform	InfinityFree
Server-Side Language	PHP 8.1 or above

Database	MySQL / MariaDB
Database Management Tool	phpMyAdmin from InfinityFree
Local Development Server	XAMPP
Browser for Testing	Google Chrome
Code Editor	Visual Studio Code
CSS Framework	Bootstrap 5
Icon Library	Font Awesome
JavaScript Libraries	Chart.js, SweetAlert2, html2pdf.js, AOS Animation
Payment Gateway	ToyyibPay Development/Sandbox
Internet Connection	Required to access online system, CDN libraries, and payment gateway

This system is developed using PHP and MySQL. XAMPP was used during local development and testing, while InfinityFree was used to publish the system online and become accessible. The database is managed using phpMyAdmin. The system also uses Bootstrap 5 for responsive design, Font Awesome for icons, and ToyyibPay as the payment gateway. Google Chrome is recommended for testing because it support modern web design and responsive layout.

4.0 INSTALLATION & SETUP GUIDE

STEP 1:

Prepare project folder named: aichecker

The folder contains PHP files, CSS files, image folder, upload folders, reports folder, receipts folder, and the database file: assignment_db.sql.

STEP 2:

Extracted Text (Used for Analysis)

Text extracted directly from the original file above, shown exactly as submitted. Sentences containing AI-indicator language are highlighted in red.

2.0 ENTITIY-RELATIONSHIP DIAGRAM (ERD)

Figure 1 Entity Relationship Diagram for AI Checker System

Figure 1 shows the Entity Relationship Diagram (ERD) for our AI Checker System. The ERD got several main tables such as users, assignments, plans, payments, payment_transactions, user_subscriptions, assignment_reviews, plag_ai, notifications, vouchers, contacts, and testimonials.

Users table is one of the main tables because it stores user and admin information. One user can submit many assignments, receive many notifications, make payments, and subscribe to a plan. The assignment table is connected to assignment_reviews and plag_ai because each submitted assignment can be reviewed by the asmin and chekcd by for AI or similarity score. The plans, payments, and user_subscriptions table are used to manage subscription plans and payment records.
